Objective

Aspiring AI/ML and software development professional with hands-on experience in Python, SQL, React.js, and web development, complemented by practical exposure to machine learning through projects such as a telecom customer churn prediction system. Eager to transform technical knowledge into scalable, user-focused solutions and grow in a challenging environment that encourages innovation, learning, and problem-solving.

Education

DRK Institute of Science and Technology **September 2023 – May 2027**
Bachelor of Technology in Computer Science and Engineering(AI & ML) *Hyderabad, India*
CGPA: 7.15/10

Governament Junior College **Aug 2021 – Apr 2023**
Telangana State Board of Intermediate Education *Hyderabad,India*
Percentage: 73.3

Technical Skills

Programming Languages: Python
Web Development: HTML5, CSS3, JavaScript, MySQL, React.js
AI/ML & Data Science: Numpy, Scikit-learn, Pandas, Data Preprocessing , Data Visualization , Statistics, Artificial Intelligence, Machine Learning Algorithms
Tools & Technologies: Git, GitHub, VS Code
Core Competencies: Object-Oriented Programming, Database Management, Computer Networks, Operating System

Projects

Customer Churn Prediction in the Telecom Sector using ML | *ML models, decision tree, random forest, xgboost* **2026**

- Developed a machine learning–based customer churn prediction system using the IBM Telco Customer Churn Dataset to classify customers as Churn/No Churn based on demographic, service, contract, tenure, and billing features.
- Implemented and compared Logistic Regression, Decision Tree, Random Forest, and XGBoost models, with data preprocessing, categorical encoding, feature selection, normalization, and SMOTE-based data balancing to improve model reliability.
- Evaluated model performance using Accuracy, Precision, Recall, F1-score, and Confusion Matrix, following an 80:20 train-test split, and designed the system to support proactive customer-retention strategies.

Cloud burst Early Warning System **2025**

- Built a web-based Cloudburst Early Warning System using**Python,Machine Learning, HTML, CSS and Javascript** to predict potential cloudburst risks.
- Processed key weather parameters such as rainfall, temperature, humidity, and atmospheric conditions for ML-based risk prediction and classification.
- Developed an interactive dashboard to visualize weather conditions, risk levels, and early warning alerts for timely preventive action.

Certifications

Innovating with Google Cloud AI — Google Cloud — 2026

Power BI for Beginners — Microsoft—2026

Getting Started with AWS Services Fundamentals for Beginners — AWS — 2026

Introduction to Generative AI — Google Cloud— 2026

DECLARATION

- I hereby declare that the above-mentioned information is correct to my knowledge and I bear the responsibility for the correctness of the same.
